

Whitepaper

Executive Summary

The cafetos project and its Token coffee is an initiative towards the future of coffee, it seeks to merge the passion for coffee with blockchain technology and cryptocurrencies. Our goal is to create an online ecosystem where coffee lovers can enjoy their favorite beverage while earning rewards in the form of our Token, called Coffee (CFE).

The cafetos platform is divided into several sections, each designed to promote and encourage coffee culture in a unique way. From rewards for each cup of coffee consumed, tips and recipes shared by the community, free courses for linked coffee farmers, to investing in projects related to coffee and the commercialization of coffee-based products, with the possibilities of Token Coffee we seek a complete experience.

Construction Phases

Phase 1: Laying the Foundation

In this initial phase, we will focus on building a strong social media and community presence. As we bring coffee lovers together and raise awareness about coffee trees, we will also work on developing our Coffee Token on the Binance Smart Chain (BSC) network. This process will include extensive audits to ensure the security and integrity of the Token.

Phase 2: Incentives and Expansion

In the second phase, we will launch our incentive system. Participants will be able to earn CFE for every cup of coffee consumed and for sharing coffee-related recipes and tips. We will implement a selection process for the most outstanding publications, providing additional prizes for the most followed. In addition, we

will build a network of coffee farmers where they can present their origin coffee crops, interact with the community and allow the purchase of coffee using CFE. We will also introduce a Staking system that will allow CFE holders to earn passive rewards.

Phase 3: Scope and Growth

In this phase, we will focus on increasing our presence by listing CFE on CoinMarketCap and on at least one recognized exchange. This will increase the visibility and accessibility of CFE to a wider audience. We will continue to grow our community and improve the user experience on our platform. In parallel, we will develop an exciting "Play-to-Earn" game focused on coffee to increase the participation and fun of our users.

Phase 4: Strengthening and Global Expansion

The fourth phase will focus on strengthening our global presence and expanding our operations. As Token Coffee becomes an active and vibrant community, we will continue to develop our game and explore opportunities for international collaborations and blockchain possibilities to build producer-to-consumer supply chains to improve conditions for producers. The game seeks to teach the process of sowing, harvesting and post-harvesting in a comprehensive way, through an immersive game, earning rewards. Our objective is to build alliances with coffee trade chains in different countries, ensuring a greater adoption of CFE.

Phase 5: Decentralization and Privacy

In the final phase, we will carry out the full decentralization of Token Coffee. We will guarantee the privacy of CFE holders and their personal information while conducting transparent operations on the blockchain. Token Coffee will become a completely autonomous and sustainable community, driven by the passion for coffee and the value of CFE.

Let's have a coffee

The Token Coffee is an ambitious vision that combines coffee culture with blockchain innovation, although it generates a benefit for all participants, we mainly seek to improve the benefits of the producer. Through a focus on rewards, community interaction and investment opportunities, we are creating an ecosystem where coffee lovers can enjoy and benefit at the same time. We hope Token Coffee will revolutionize the way we interact with coffee and blockchain technology.
